connect.vet

A PACS is often seen as a necessary evil. It is typically slow, requires servers with hard drives that can fail, has backups that never work when you need them, requires a lot of exporting and importing, and has complex settings that need IT specialists to manage.

Connect.Vet is nothing like this; it is your daily tool to...

...share and visualize all kind of images,

but also create **reports**

...store x-ray, ultrasound, CT, MRI...

but also **videos** and **photos**

...communicate with other PACS,

and other **vets** and **clinics**

...publish studies to owners,

and share your **business cards**

...it works in your favorite browser

but also **local**

...it works on PC and Mac

but also on your **phone** (iOS and Android)

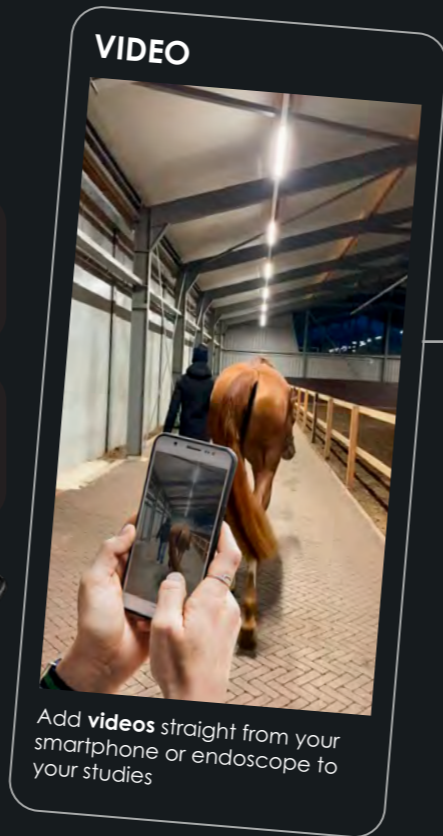

...it is really fast

but also **very reliable**

Learn more about connect.vet

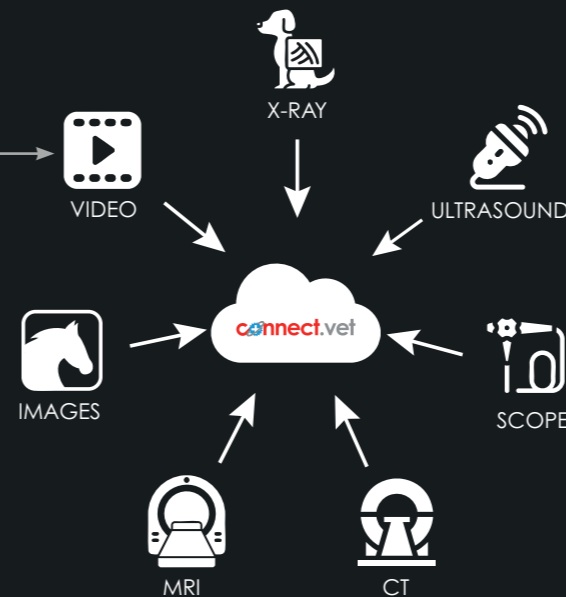

connect.vet

connect.vet

connect.vet is the **central hub** for all your medical imaging. We offer seamless integration with most; if not all; devices, ensuring that every image (X-ray, ultrasound, CT, video, and more) is collected in a single study. Conveniently and securely stored in your private cloud, everything is **always within reach**.

UPGRADE PACKAGES AVAILABLE

Your detector stays, the future moves in. Experience the difference!
